

## Mineral revenues fund community health centre

One morning in December 2015, a 900m<sup>2</sup> plot of land stretched before Olivier Mitima in the town of **Nyabibwe**, South Kivu, DRC. Olivier is the president of the town’s civil society as well as president of the local monitoring committee (CLS) of mining activities in the Nyabibwe area. He explained with excitement that a health centre was going to be built there soon thanks to a new fundraising scheme. Fund-raising had been tried some years ago but was not successful, but many things have changed in this town of 20,000 residents in recent years. It all started after the **iTSCi programme** was implemented in 2012 in South Kivu with political and financial support from the Dutch Ministry of Foreign Affairs which broke the de-facto embargo on 3T mineral trade from high risk areas.

Soon after, civil society in the province promoted the idea of a community fund-raising system based on mineral production with the goal of financing sustainable projects that could benefit local communities. As a result, the idea was officially implemented in December 2013 by provincial decree and **the South Kivu basket fund was born**. Thanks to the success of iTSCi implementation, minerals from Nyabibwe are now legally produced and exported, and the government is able to collect tax revenues from mineral traders, and in particular from mineral exporters. As well as normal taxes, iTSCi exporters of 3T minerals also contribute US\$180 per tonne to the basket fund. There are currently no contributions from the gold exports from the province.

*Thanks to the success of iTSCi, revenues can be collected from legally traded minerals. Exporters contribute to a community basket fund in addition to normal taxes.*

Ministry of Foreign Affairs of the Netherlands

*Nyabibwe was allocated US\$50,000 from the basket fund and stakeholders decided to build a new health centre.*

The basket fund is managed by civil society, the Federation of Congolese Enterprises (FEC) and the provincial Ministry of Mines of South Kivu. Nyabibwe has been one of the first towns in South Kivu to benefit from this fund and received **US\$50,000** in an allocation resulting from the tin and tantalum mineral trade from the area encouraged by the iTSCI system. Through a process of consultation with local and provincial authorities, schools, churches, NGOs, businesses, artisanal miners, and residents, the construction of a health center was ultimately selected.

*The centre almost complete and due for inauguration [Photo: Pact]*

*Construction work on the centre started in March 2016 [Photo: Pact]*

*Around US\$220,000 has been contributed from iTSCI exporters and three schools are now also being built.*

Valéry Rubona, a nurse in Nyabibwe, said the centre would have three major services; health promotion, preventive care, curative care and obstetrics, and explained how *“Primary health care costs will be much cheaper in the new centre, it will ensure a better referral system in terms of preventive care, and only the most serious cases will be transferred to the hospital.”* The hospital is further away from Nyabibwe and more expensive for the same type of treatment.

Up until December 2015, approximately **US\$220,000** has been contributed from mineral exporters into the fund in South Kivu. Following the success of the system three schools are now being built in other neighboring towns as well. The construction work on Nyabibwe’s health center is finished and the centre will be open and providing services in the coming months.

## iTSCI Programme

*Supporting responsible mineral production*

c/o iTSCI Secretariat at ITRI Ltd  
3 Curo Park  
St Albans

*iTSCI was developed and is managed by the global not-for-profit tin and tantalum industry associations ITRI and T.I.C. as an inclusive, sustainable, multi-stakeholder programme. We assist all actors in implementing OECD recommended due diligence to create responsible 3T mineral supply chains and benefit from trade, even from high risk areas. iTSCI has a track record of global co-operation and achievement contributing to capacity building, better governance, human rights and stability through monitoring more than 1,500 mine sites in Burundi, DRC, Rwanda and Uganda, and protecting the livelihood of tens of thousands of miners plus their communities.*

*See more news and information on <http://itsci.org>*

*The field activities of iTSCI are implemented through Pact Inc. The programme is funded by the 3T mineral business with support from the Dutch Ministry of Foreign Affairs.*
