

### OHS aids in production increases at Motongo Mine site

Occupational Health and Safety (OHS), are often not considered by miners. Besides dire consequences such as injury or death, accidents at mines can have negative social and psychological implications as well as economic consequences when mining activities become disrupted leading to loss in production and revenue.

In February 2017, Pact/ITSCI teams conducted a “Training of Trainers,” with funding from the Dutch Ministry of Foreign Affairs to provide OHS training in the Nyunzu-Kalemie area of the Tanganyika Province, DRC. One of the attendees, supervisor Jean-Claude Musulman, of the technical state mining agency Service for Assistance and Supervision of Artisanal and Small Scale Mining organization) (SAEMAPE), used his learnings from the training to pass on his knowledge to Paul Mayombo, chief of pit at the Matongo Mine site. Mayombo, in turn applied the instructions and tools he learnt to his two teams, comprised of 11 miners. Given that SAEMAPE lacked the funds to put in place an official OHS committee and the “Training of Trainers” provided a cost-effective solution to implement OHS measures.

“OHS is an asset to mitigate risks of accidents and help increase production.”

-Paul Mayombo, chief of pit at the Matongo Mine site

The teams mapped the different work stations in each pit, such as excavation works, disposal of excavated works, and washing of minerals. For each work station, Mayombo appointed a responsible miner in charge of ensuring that instructions on safety and hygiene are followed. The teams also began looking for warning signs, such as cracking of walls or humidity in the pits, so that corrective measures are taken to prevent accidents.

Since these interventions, the site has had zero accidents and daily production has tripled.

#### ITSCI Programme

Supporting responsible mineral production

c/o ITSCI Secretariat at ITA

ITSCI was developed and is managed by the global not-for-profit tin and tantalum industry associations ITA and T.I.C. as an inclusive, sustainable, multi-stakeholder programme. We assist all actors in implementing OECD recommended due diligence to create responsible 3T mineral supply chains and benefit from trade, even from high risk areas. ITSCI has a track record of global co-operation and achievement contributing to capacity building, better governance, human rights and stability through monitoring more than 1,500 mine sites in Burundi, DRC, Rwanda and Uganda, and protecting the livelihood of tens of thousands of miners plus their communities.

The field activities of ITSCI are implemented through Pact Inc. The programme is funded sustainably by upstream operator benefiting from the initiative.
